## COMPANY PROFILE

PATENTICA is an international intellectual property company having offices in Russia and UK and providing its clients with the highest standard of service. We are happy to offer our services for filing applications both with Russian and Eurasian Patent Offices, covering:

- national patent applications and national entry of PCT applications;
- trade marks and industrial designs;
- international patent and trade mark searches, including Russian patents and authors' certificates;
- translation from English, German or French (Japanese on request) into Russian;
- assistance in litigation.

At present, a great variety of technologies embodied in production equipment, consumer goods and products of all types are being imported into Russia. Chemical, pharmaceutical and medical industries, as well as electronics and information technology, are among the most important fields that need effective protection for products and processes, to cover the often very high costs of development.

Two issues are usually faced by applicants when protecting intellectual property in Russia. First, Patent Law has only been in effect in Russia since 1992. Therefore, the legacy of previous Russian regulations and the persistence of an outdated approach to intellectual property sometimes make it difficult to obtain proper protection. Secondly, patent laws differ substantially in different countries; in particular, it is at times a challenge to coordinate a client's interests with Russian regulations.

We at Patentica are confident that with our support, our clients will navigate successfully through all phases of intellectual property rights protection. We regard each new patent obtained by our client as our contribution to the harmonization of intellectual property rights throughout the world.
